Photon Return & Spot Elongation

Rayleigh Diffusion & Fratricide Effect

Sodium Photon return

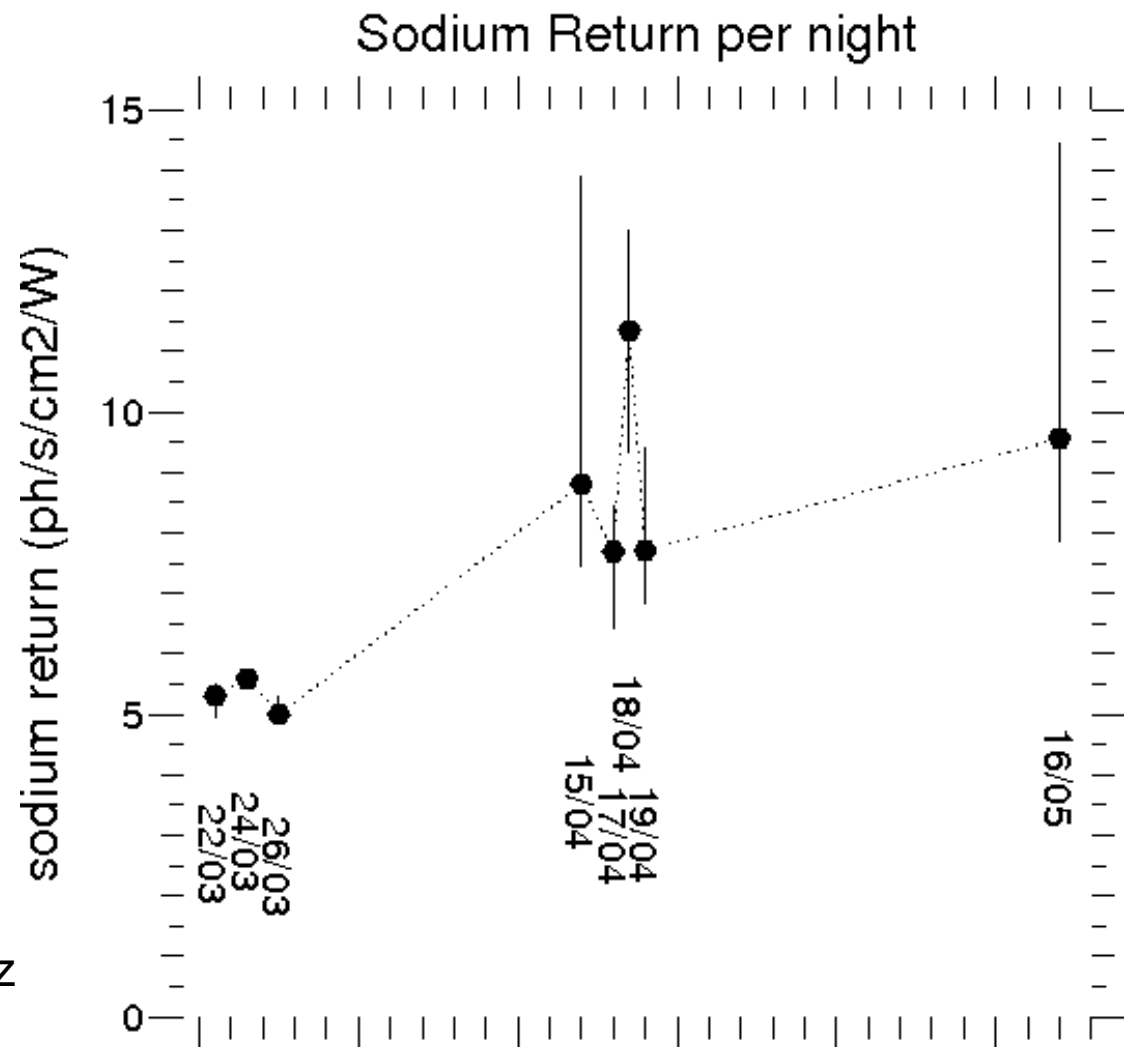

Large flux variation within few months.

March	5.4 ph/s/cm ² /W
April	8.7 ph/s/cm ² /W
May	9.5 ph/s/cm ² /W

W == Watts propagated on-sky

10 ph/s/cm²/W
=> 35 ph/frame/pix @ 800Hz

Sodium photon return computed at the LGSWFS

Sodium Photon return

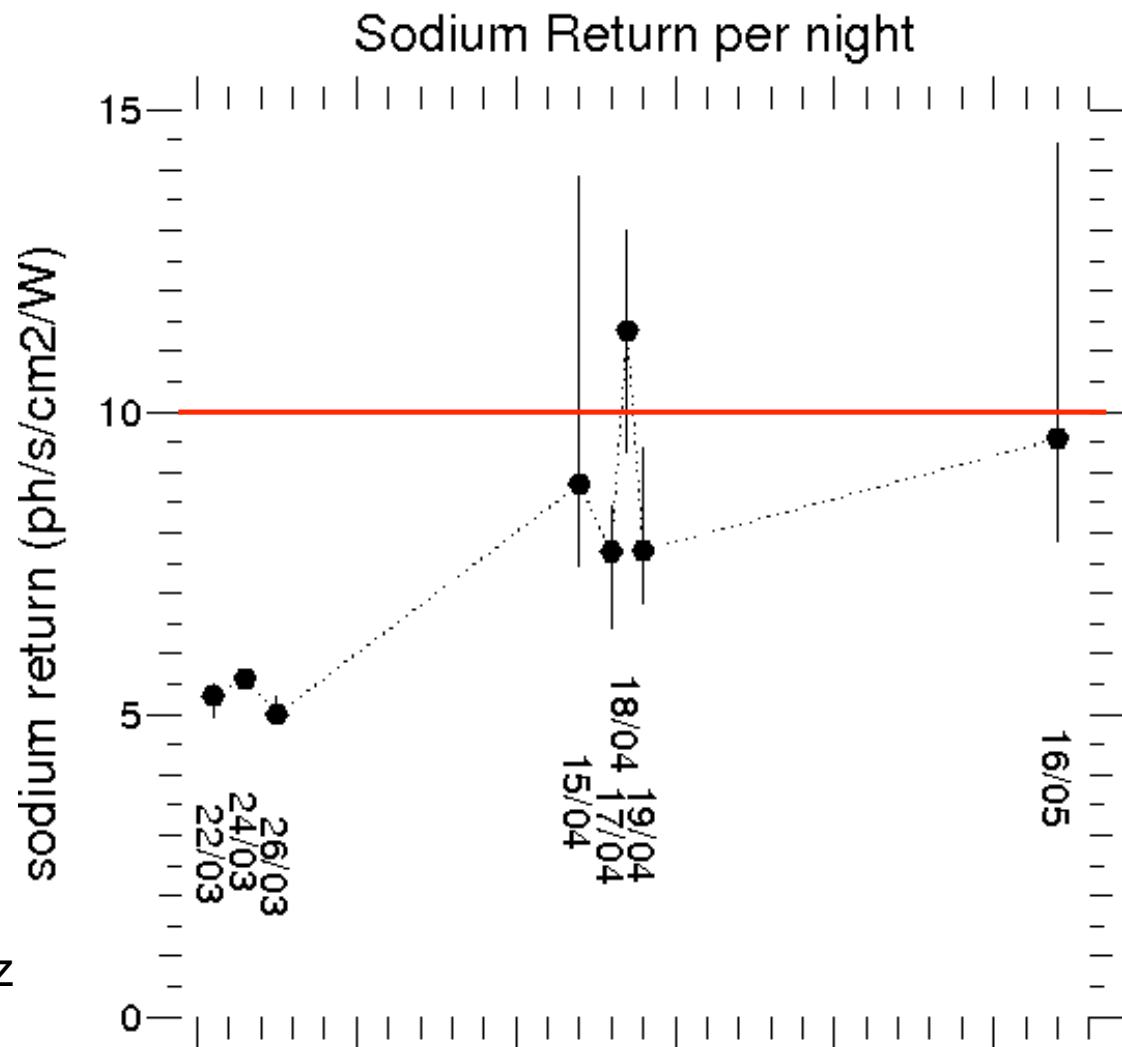

Large flux variation within few months.

March	5.4 ph/s/cm ² /W
April	8.7 ph/s/cm ² /W
May	9.5 ph/s/cm ² /W

W == Watts propagated on-sky

10 ph/s/cm²/W
=> 35 ph/frame/pix @ 800Hz

Sodium photon return computed at the LGSWFS

Sodium Photon return

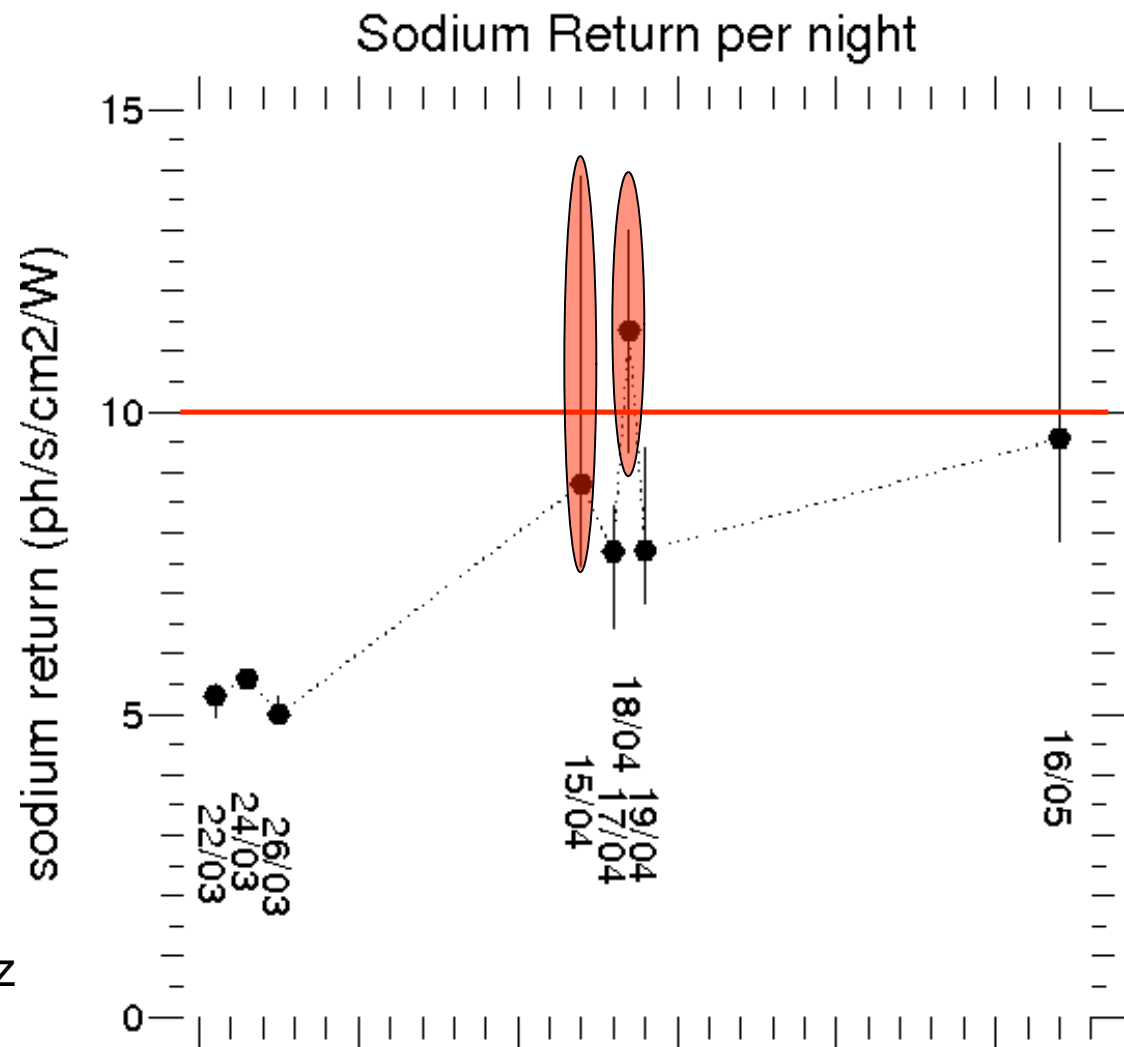

Large flux variation within few months.

March	5.4 ph/s/cm ² /W
April	8.7 ph/s/cm ² /W
May	9.5 ph/s/cm ² /W

W == Watts propagated on-sky

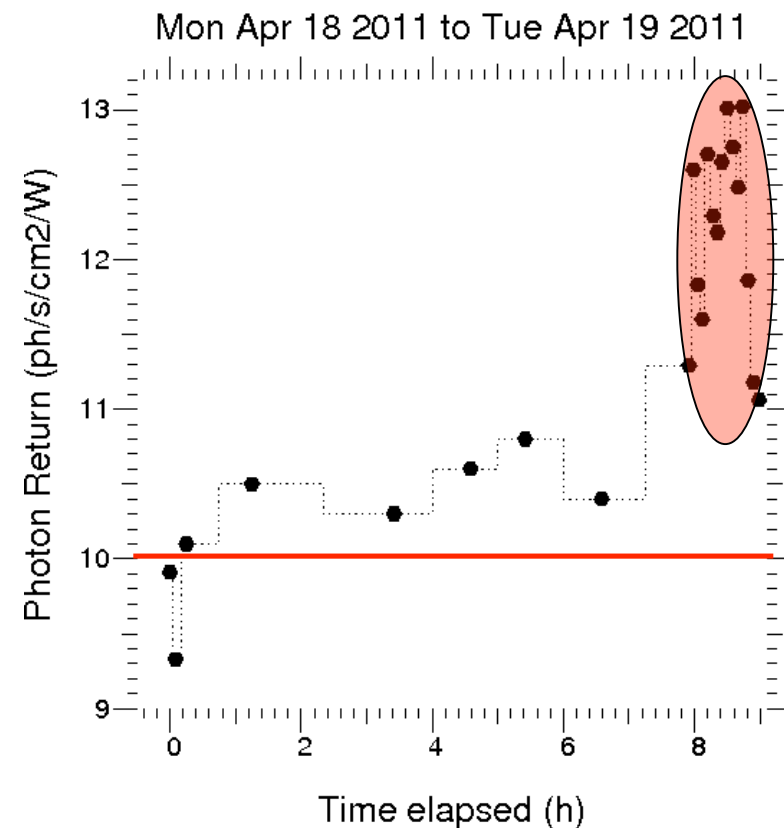

10 ph/s/cm²/W
=> 35 ph/frame/pix @ 800Hz

Sodium photon return computed at the LGSWFS

Sporadic increased the flux by up to 50% !

=> Sodium return can change

=> Should be included in the reconstructors / optimization procedures

Spot elongation

$$\alpha \simeq \frac{L \cdot \Delta H}{H^2 + H \cdot \Delta H}$$

Spot elongation

LGSWFS are using Quad-cells

Spot size is measured with a Dithering method

Gratadour, Rigaut, OSA 2003

Projection onto (X,Y,R) => Elongation => Na layer thickness

$$\alpha \simeq \frac{L \cdot \Delta H}{H^2 + H \cdot \Delta H}$$

$$\Delta H \simeq \frac{\alpha H^2}{L - \alpha H}$$

Spot elongation

First ***preliminary*** results

=> Monitoring of Sodium layer thickness every ~10s.

Laser “Fratricide” effect

Laser “Fratricide” effect

Rigaut's Production

Laser “Fratricide” effect

Modeling of the Fratricide:

$$I(h) = k \cdot \text{Exp}(-h / \text{ScaleHeight})$$

Laser “Fratricide” effect

Modeling of the Fratricide:

$$I(h) = k \cdot \text{Exp}(-h / \text{ScaleHeight})$$

$$h_1 \begin{cases} 3.4\text{km} \\ 6.9\text{km} \end{cases} \quad h_{\max} \begin{cases} 27.5\text{km} \\ 41.2\text{km} \end{cases}$$

Laser "Fratricide" effect

Modeling of the Fratricide:

$$I(h) = k \cdot \text{Exp}(-h / \text{ScaleHeight})$$

$$h_1 \begin{cases} 3.4\text{km} \\ 6.9\text{km} \end{cases} \quad h_{\max} \begin{cases} 27.5\text{km} \\ 41.2\text{km} \end{cases}$$

Laser "Fratricide" effect

Modeling of the Fratricide:

$$I(h) = k \cdot \text{Exp}(-h / \text{ScaleHeight})$$

$$h_1 \begin{cases} 3.4\text{km} \\ 6.9\text{km} \end{cases} \quad h_{\max} \begin{cases} 27.5\text{km} \\ 41.2\text{km} \end{cases}$$

Laser “Fratricide” effect

Modeling of the Fratricide:

$$I(h) = k \cdot \text{Exp}(-h / \text{ScaleHeight})$$

$$h_1 \begin{cases} 3.4\text{km} \\ 6.9\text{km} \end{cases} \quad h_{\max} \begin{cases} 27.5\text{km} \\ 41.2\text{km} \end{cases}$$

Laser “Fratricide” effect

Modeling of the Fratricide:

$I(h) = k \cdot \text{Exp}(-h / \text{ScaleHeight})$
+ Rotation + Offsets + LLT beam position

$h_1 \begin{cases} 3.4\text{km} \\ 6.9\text{km} \end{cases} \quad h_{\text{max}} \begin{cases} 27.5\text{km} \\ 41.2\text{km} \end{cases}$

Laser “Fratricide” effect

Modeling of the Fratricide: Fitting data

Data

Model

Residual

Offsets = -1.8, -0.1 arcsec

Flux = +3.3, Angle +0.8 degree

Scale height = +5.1km

LLT offsets, beam 0: +1.7, -8.6 cm

LLT offsets, beam 1: -7.0, -12.5 cm

LLT offsets, beam 2: +7.1, -14.2 cm

LLT offsets, beam 3: +2.2, -8.4 cm

LLT offsets, beam 4: +3.2, -15.0 cm

Laser “Fratricide” effect

Modeling of the Fratricide: Fitting data

Data

Model

Residual

Offsets = -1.8, -0.1 arcsec

Flux = +3.3, Angle +0.8 degree

Scale height = +5.1km

Average scale height of earth = 7.64 km

Cerro Pachon = 2.6km

Laser “Fratricide” effect

Impact of Fratricide on the slopes: Can we calibrate it ?

WFS subapertures flux

Initial strategy was:

1. Detune the Laser
2. Acquire a dark
3. Subtract dark

Laser “Fratricide” effect

Impact of Fratricide on the slopes: Can we calibrate it ?

WFS subapertures flux

Initial strategy was:

1. Detune the Laser
2. Acquire a dark
3. Subtract dark

But...

Laser “Fratricide” effect

WFS subapertures flux

Initial strategy was:

1. Detune the Laser
2. Acquire a dark
3. Subtract dark

Rayleigh modulation due to Fast Steering Mirrors

=> Not in pupil plane

=> Jitter of the beams on the LLT

Laser “Fratricide” effect

Impact of Fratricide on the slopes: Can we calibrate it ?

WFS subapertures flux

With Rayleigh background subtracted

Can we calibrate it ?

=> Maybe, but would need dedicated (& real-time ?) procedure.

=> Not implemented in current GeMS real-time software.

Laser “Fratricide” effect

Impact of Fratricide on the slopes: Can we calibrate it ?

Some more (not too much) exotic issues:

Clouds

Motor control issue ?

Large misalignment

Can we calibrate it ?

=> Maybe, but would need dedicated (& real-time ?) procedure.

=> Not implemented in current GeMS real-time software.

Laser “Fratricide” effect

Impact of Fratricide on the slopes: Can we calibrate it ?

=> Remove contaminated subapertures = 224 subap lost

=> New extrapolated actuators on DM4.5

Conclusions

- LGSWFS flux variation could be included in reconstructors / optimization procedures
- Fratricide calibration is challenging
 - More characterization of the beams jitter
 - Implement new (real-time ?) background estimation procedures
 - Propagate the slope errors in the reconstructed phase, test different reconstructor
 - Better control of the static alignment
